

Tao Nguyen Van

Fresher Java Developer

<https://github.com/nvan2903> • tnvan2903@gmail.com • +(84) 372171784

Education

Vietnam – Korea University Of Information And Communication Technology (VKU)

Bachelor of Computer Science, Concentration in Software Engineering

Da Nang, Vietnam

Expected Graduation:

March 2026

GPA: 3.3/4

Experience

FPT Software Danang

Java Developer Intern

Danang, Viet Nam

Jan 2025 – Mar 2025

- Applied Java Core concepts (OOP, Collections, Exception Handling, design principles) in feature development and maintenance tasks.
- Worked with SQL and database design, writing MySQL queries to support data processing and business requirements.
- Participated in Java web application development using Spring and Spring Boot in accordance with technical standards and internal processes.
- Developed and modified CRUD APIs, following the Controller – Service – Repository architecture and handling request/response flows.
- Used Git for source code management, including branching, creating pull requests, and resolving merge conflicts during team collaboration.
- Communicated and reported work progress professionally, writing emails, submitting daily reports, and following internal communication guidelines.
- Worked within Agile/Scrum processes, participating in daily meetings, sprint activities, and collaborating with team members on ongoing projects.

Remote Client Project

Remote Backend Developer (Project-based)

Remote

Jun 2024 – Aug 2024

- Developing backend APIs using Java and Spring Boot for user management, project posting, and developer listing features.
- Implementing subscription logic to manage service packages, including contact-limit validation and usage tracking.
- Building project-posting workflows and developer-matching logic based on skill tiers (Expert/Mid/Fresher).
- Integrating authentication modules such as JWT Authentication, email login, and Google OAuth.
- Creating admin/client APIs including developer listing, contact-view logging, and project status updates.
- Collaborating remotely through requirement documents and Figma prototypes to deliver features within planned deadlines.
- Performing API testing, debugging, and log tracking to ensure data consistency across user, subscription, and project modules.

Leadership & Activities

AI Research Group – VKU

Da Nang, Vietnam

Leader

Aug 2025 – Present

- Conducting research on integrating Computer Vision and Large Language Models for agricultural disease diagnosis
- Implemented CNN-based models (ResNet-50 for rice leaf disease classification using Python and PyTorch)
- Developed prototype web and mobile interfaces for real-time disease detection and AI consultation
- Collaborated with team members to deploy models using Flask API and evaluate accuracy on local rice datasets

Technical Skills

- Programming languages: Java, Python
- Frameworks and libraries: Spring Framework, Flask
- Databases: MySQL, SQL Server, MongoDB
- Tools and platforms: Git, Docker, Postman, Linux (Ubuntu)

Soft Skills

- Good communication, teamwork, leadership, critical thinking.
- Fast learner, adaptable, resilient problem-solver.
